Advanced Warfighter Magazines (AWM) fill the gap between the current metal and polymer magazine designs. These lightweight molded polymer magazines stand up to rough handling and extreme conditions of tactical operations, including heat and impact of sustained full-auto fire. Permanently attached, wrap-around feed lips are made from a single piece of precision formed, hardened steel that is PTFE coated for corrosion resistance. They help promote smooth ammo movement and will not deform when the magazine is stored fully loaded over a long period of time. Tested to withstand temperature extremes of -50 degrees F to +180 degrees F and a 5 foot drop fully loaded, onto concrete without impairment of function. Non-reflective exterior has molded-in ridges and enhanced texturing that improve the structural strength and provide a solid grasping surface. Drops free from mil-spec magwells; load to full capacity and insert into weapons with bolt closed. 30-round model fits pouches designed for standard US-GI-spec magazines. Anti-tilt follower and constant-radius body curve helps ensure smooth, snag-free feeding. Hard polymer base plate provides a positive gripping surface for extracting mag from tight-fitting pouches and removes easily for disassembly and cleaning.
