## Robust, One-Piece Catch Maintains Low Mag Release Button Profile

With straightforward one-piece construction giving it extra strength, the Enhanced Magazine Catch from Battle Arms Development is more robust AND lighter than typical AR-15 magazine catches. Its threaded post is shorter than that of standard mag catches, resulting in a lower profile for the magazine release button. The result is you're less likely to accidentally bump the button and dump your mag at an inopportune moment. Investment cast 8620 heat-treated steel is as strong as a machined part Durable Black phosphate finish Fluted design keeps weight down without sacrificing strength The Enhanced AR-15 Magazine Catch is compatible with the standard mil-spec mag release button, as well as Battle Arms BAD-EMR, BAD-EMMR, and similar buttons. And the price? Pretty impressive, too.
