Integral Shield Helps Prevent Search & Rescue Of Flying Parts

Simple, practical wrench includes an integral shield that blocks the recoil plug from going airborne during bushing removal on Government models and clones. Makes the entire process of field stripping your pistol faster and safer. Heavy gauge steel construction makes rotating even the tightest-fitting bushings smooth and effortless, plus eliminates bending or rounding-off of the bearing surfaces that can lead to slippage. Smooth edges around the entire circumference of the tool make it comfortable in the hand and help prevent marring of the bushing, slide, or plug.
