Design Enhancements For Superior Performance; Standard & Ambidextrous Models

Novak takes the 1911 safety a step further with streamlined styling and several operating enhancements. A re-designed detent enables extremely positive engagement and helps hold the plunger tube against the frame to keep it from working loose. The right-hand paddle on the ambidextrous model is keyed and pinned to the shaft to prevent flex and eliminate the need for the grip to hold the right lever in place. It also permits a much slimmer paddle that works with any grip, including LaserGrips. Completely “carry beveled” with all sharp edges removed for shooter comfort and control.
