

Sinclair Chamber Length Gage - SINCLAIR INTERNATIONAL 9.3MM CHAMBER LENGTH GAGE

[Reloading](#) > [Measuring Tools](#) > [Case Gauges & Headspace Tools](#)

The Sinclair Chamber Length Gauges are designed so the handloader can determine the true length of his rifle's chamber when measuring from the bolt face to the end of the chamber's neck. This measurement will tell you how much excess case length your chamber may have over published trim lengths in reloading handbooks. The Sinclair Gauges are inserted into a fired, unprimed shortened case and then chambered into your rifle. The insert pushes back into the case when it contacts the end of your chamber. You then extract the case and measure the overall length. The gauge is made of 12L14 soft steel so it will not damage your chamber. Step-by-step instructions accompany each gauge. The gauges can be used over and over again. The differences between published trim lengths and the actual length of your chamber can be quite significant. You could be over trimming your cases by .030 inch or more. NOTE: The 22 caliber gauge will not work on thin-necked cases such as the 22 Hornet, 218 Bee, or cartridges based on these cases. The 30 caliber gauge will not work on the 30-30 Winchester. None of the gauges listed will work on tight-necked chambers except for the G-243T. Should not be used in handguns, semi automatic rifles, lever actions rifles and pump action rifles.

Sinclair Chamber Length Gage Safety Instruction Guide

Introduction

Thank you for choosing the Sinclair Chamber Length Gage. This product is designed to help handloaders accurately measure the chamber length of their rifles. Proper use of this tool is essential for safety and effective reloading practices. Please read this safety instruction guide carefully to ensure safe and effective use of the product.

General Safety Guidelines

- Always use the Sinclair Chamber Length Gage in accordance with the manufacturer's instructions.
- Ensure the firearm is unloaded before using the gauge.
- Use the gauge only in compatible firearms as specified in the product description.
- Keep the gauge away from children and unauthorized users.
- Report any unsafe products or incidents to the relevant authorities.
- Stay informed about product recalls through the EU's Safety Gate platform.

Specific Safety Precautions for Use

- Do not use the gauge on thinnecked cases such as the 22 Hornet or 218 Bee.
- Avoid using the 30 caliber gauge on 3030 Winchester cartridges.
- This gauge should not be used in handguns, semiautomatic rifles, leveraction rifles, or pumpaction rifles.
- Inspect the gauge for any signs of damage before use. Do not use if damaged.
- Ensure that the gauge is inserted properly into a fired, unprimed shortened case.
- Do not force the gauge into the chamber; if resistance is felt, stop using immediately.

Instructions for Installation and Usage

1. Preparation:

- Ensure your rifle is unloaded and pointed in a safe direction.
- Select a fired, unprimed shortened case that is compatible with your firearm.

2. Inserting the Gauge:

- Insert the Sinclair Chamber Length Gage into the prepared case.
- Chamber the case into your rifle gently. The gauge will push back into the case when it contacts the end of the chamber.

3. Measuring Length:

- After chambering, extract the case from the rifle.
- Measure the overall length of the case using a caliper or ruler.
- Compare this measurement with published trim lengths in reloading handbooks.

4. Reusing the Gauge:

- After use, clean the gauge if necessary and store it in a safe place for future use.
- The gauge can be used multiple times; ensure it remains undamaged for accurate measurements.

Disposal Instructions

- Dispose of the Sinclair Chamber Length Gage according to local regulations.
- If the gauge is damaged beyond repair, it should be recycled or disposed of in a way that prevents any potential harm to the environment.
